## Aim:

Write a program to find the length of a given string without using string library functions.

At the time of execution, the program should print the message on the console as:

```
Enter a string :
```

For example, if the user gives the input as:

```
Enter a string : Ganga
```

then the program should **print** the result as:

```
Length 5
```

**Note:** Do use the **printf()** function with a **newline** character (\n) at the end.

## **Source Code:**

```
Program601.c
```

```
#include<stdio.h>
int main()
{
   char s[20];
   int i;
   printf("Enter a string : ");
   scanf("%s",s);
   for(i = 0;s[i] !='\0';++i);
   printf("length %d\n",i);
   return 0;
}
```

## Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter a string : Amaravathi
length 10
```
